837afb8 Updated timesheet

DEMO PREP

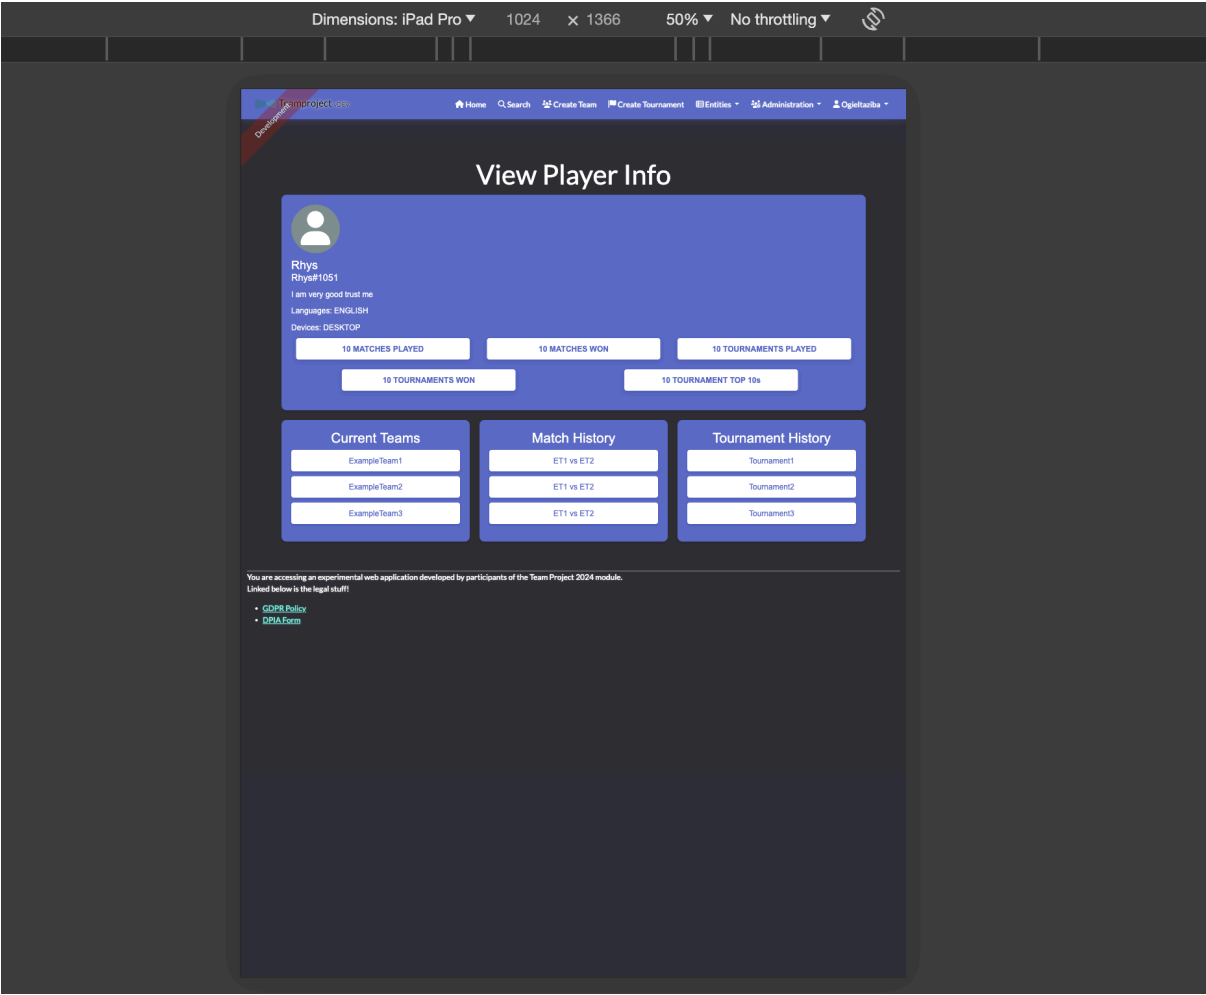

My feature is the view player info feature also known as the player dashboard. It is a tool which helps players, coaches and even tournament organisers view and analyse player performance. On the frontend, the dashboard is divided into 4 main cards; the profile card, current team card, match history card and tournament history card. The profile card contains general information about the player for example name, username, device they play on and more. It also contains some general stats about the player like the amount of matches played and matches won, including their tournament data like tournament wins and top 10s and also amount of tournament appearances. It serves as a simple but indepth way to track useful player statistics. Moving on to the current team card. This displays information about which teams a player is currently a member. Similarly with the match history and tournament history cards which simply show a players match and tournament history respectively. On the backend, requests are made from the database to get the information displayed on the frontend.

In terms of accessibility my player dashboard can be navigated with the use of only a keyboard, continuously clicking the “Tab” button allows one to seamlessly navigate through the page and in turn to other pages as well. It is also very responsive to different screen sizes.

Below is the view on an iPhone14 Pro Max
